

edi-Klin TR Clindamycin + Tretinoin Cream for Inflamed Acne, Pimples Acne Vulgar

Indonesia

-0.789275, 113.92132700000002

Practical Results Trial results indicated that clindamycin phosphate gel was more effective than a vehicle gel in the treatment of mild to moderate acne vulgaris. The 12-week, multicenter, randomized, vehicle-controlled trial compared clindamycin phosphate topical gel, 1% once daily to a vehicle gel administered once daily. The mean percent reduction in lesion counts at the end of treatment was 51% for clindamycin phosphate gel versus 40% for the vehicle gel for inflammatory lesions. For non-inflammatory lesions, the mean percent reduction was 25% for clindamycin phosphate gel and 12% for the vehicle gel. The total mean percent reduction in lesion counts at the end of treatment was 38% for clindamycin phosphate gel and 27% for the vehicle gel. In a contact sensitization trial, four of the 200 subjects appeared to develop suggestive evidence of allergic contact sensitization to clindamycin phosphate gel. There was no signal for contact sensitization in the clinical trials under normal use conditions. Side Effects Adverse reactions associated with the use of clindamycin phosphate gel include itching and peeling skin. Cases of diarrhea, bloody diarrhea, and colitis have been reported as adverse reactions in subjects treated with oral and parenteral (intravenous) formulations of clindamycin, and have been reported rarely with topical clindamycin. Abdominal pain and gastrointestinal disturbances, as well as gram-negative folliculitis (bacterial infection and inflammation of hair follicles), have also been reported in association with the use of topical formulations of clindamycin. Mechanism of Action Although clindamycin phosphate is inactive in vitro, rapid in vitro hydrolysis converts this compound to clindamycin which has antibacterial activity. Clindamycin inhibits bacteria protein synthesis at the ribosomal level by binding to the 50S ribosomal subunit and affecting the process of peptide chain initiation.
